

# Undergraduate Research Fellowship

## About the Fellowship

The CMI Undergraduate Research Fellowship (URF) provides interdisciplinary research training to underserved research-oriented students who have a strong interest in pursuing a Ph.D. in the Biomedical field. This program was created to address the national deficiency of diversity in the biomedical workforce. The CMI URF at NC State University aims to contribute to diversifying the pool of students pursuing entry into Ph.D. programs in the biomedical field. Successful candidates will be drawn from academically motivated and disadvantaged students in the Biological Sciences, Chemistry, Psychology, Biomedical Engineering, and other Science, Technology, Engineering, and Math (STEM) disciplines.
